Polaris BioEvo - Initial Repository Files

Starter files for GitHub repository.

README.md

```
# Polaris BioEvo

Persistent Organic Learning and Adaptive Recursive Intelligence System

## Vision
Build an evolutionary software engineer.

Core Principle:
Zero -> Memory -> Evolution -> Infinity
```

requirements.txt

```
openai
pydantic
sqlalchemy
pytest
docker
numpy
pandas
rich
pyyaml
```

polaris/genome/genome.py

```
from dataclasses import dataclass

@dataclass
class Genome:
    creativity:int
    planning:int
    testing:int
    optimization:int
    risk_tolerance:int
```

polaris/genome/mutation.py

```
import random

def mutate(genome):
    field=random.choice(["creativity","planning","testing","optimization"])
    setattr(genome, field, max(1,min(10,getattr(genome,field)+random.choice([-1,1]))))
    return genome
```

polaris/agents/base_agent.py

```
class BaseAgent:
    def __init__(self, genome):
        self.genome = genome
```

polaris/llm/prompts.py

```
        def build_prompt(genome):
            return f"Creativity={genome.creativity} Planning={genome.planning}"
```

polaris/evaluation/fitness.py

```
        def fitness(tests, quality, perf, security, docs):
            return tests*0.4 + quality*0.2 + perf*0.15 + security*0.15 + docs*0.1
```

docs/ROADMAP.md

```
v0.1 Population + Memory
v0.2 LLM Generation
v0.3 Evolution
v1.0 Self Redesign
```
